

Inbound Voice Agent — Capstone Submission Guide

NovaTech Solutions • FAQ Welcome Agent

Purpose: Ready-to-use Loom recording script, demo flow, screenshot checklist, and LMS submission text.

1. Loom / YouTube Demo Script

Target length: 2–4 minutes. Record your Vapi screen while demonstrating the simulated conversation.

Opening

“Hello, in this demo I’m presenting my inbound AI Welcome and FAQ Voice Agent for NovaTech Solutions. The agent provides a professional greeting, identifies caller intent, answers predefined FAQs, handles unclear and out-of-scope requests, supports escalation, and ends calls professionally.”

Show configuration

Briefly show the FAQ Welcome Agent, the published assistant, the system prompt, FAQ knowledge base, model/transcriber/voice settings, end-call settings, and the phone number assignment.

Greeting

Start the simulated test and show the greeting: “Hello! Thank you for calling NovaTech Solutions. How can I help you today?”

FAQ Match 1

Caller: “What are your opening hours?”

Expected: “We are open Monday through Friday from 9 AM to 6 PM EST.”

FAQ Match 2

Caller: “Where are you located?”

Expected: “Our main office is located at 100 Innovation Way, Suite 400, Austin, TX.”

FAQ Match 3

Caller: “What services do you provide?”

Expected: “NovaTech Solutions provides technology and business solutions for its customers.”

Unclear

Caller: “So this is to you. White.”

Expected behavior: politely ask the caller to clarify.

Out of scope / fallback

Caller: “What is your risk for the policy?”

Expected: “I’m sorry. I don’t have that information available. Please contact our customer support team for further assistance.”

Escalation

Caller: “I want to speak to a representative.”

Expected: acknowledge the request and direct the caller to customer support.

Closing

Caller: "Thank you. Goodbye."

Expected: "You're welcome. Thank you for calling NovaTech Solutions. Have a great day. Goodbye." Then show that the assistant ended the call.

Wrap-up

"This demonstrates the greeting, FAQ matching, unclear-query handling, fallback behavior, escalation handling, and professional call termination."

2. Screenshot Checklist for Repository

1. Assistant overview showing the FAQ Welcome Agent and published/current version.
2. System Prompt showing the three intent categories: FAQ MATCH, UNCLEAR, and ESCALATION.
3. FAQ knowledge base showing the predefined question/answer pairs.
4. Model settings showing GPT-4.1 and the configured temperature/max-token settings.
5. Transcriber settings showing the selected STT model and English language.
6. Voice settings showing the selected ElevenLabs/Vapi voice configuration.
7. General/message settings showing First Message, End Call Message, End Call Phrases, and Maximum Duration.
8. Phone Number page showing +1 (810) 267-8220 and FAQ Welcome Agent assigned under Inbound Settings.
9. Test transcript showing FAQ matches, unclear handling, fallback, escalation, and call termination.
10. Publish screen/version evidence showing the assistant was published.

3. Assessment Evidence Already Demonstrated

Requirement	Evidence
Greeting	Successful simulated test greeting
FAQ matching	Opening hours, location, customer support, services
Unclear handling	Clarification response
Fallback	Out-of-scope question received fallback response
Escalation	Representative request received escalation response
Call termination	Goodbye phrase triggered professional closing and call ended

4. LMS Description — Copy/Paste

Completed the Inbound Voice Agent capstone for NovaTech Solutions using Vapi.

Implemented:

- Professional welcome greeting and receptionist persona
- Intent classification for FAQ MATCH, UNCLEAR, and ESCALATION
- Predefined FAQ knowledge base
- FAQ matching with concise phone-friendly responses
- Fallback handling for unsupported questions without fabrication
- Escalation handling for requests to speak with a representative
- Professional end-call message and end-call phrases
- Maximum call duration configuration
- Inbound phone number assignment to the FAQ Welcome Agent
- Simulated end-to-end conversation testing

Testing demonstrated successful FAQ responses for opening hours, location, customer support, and services; clarification for an unclear request; fallback for an out-of-scope request; escalation handling; and professional call closure.

Limitation/assumption:

The Vapi free US number could not be used for outbound international calls to an Indian +91 number. Therefore, the demonstrated end-to-end validation was performed using Vapi's simulated/browser test environment rather than an international outbound PSTN call. The phone number and inbound assistant assignment are configured in Vapi.

Supporting evidence includes configuration screenshots and the Loom/YouTube demonstration link.

5. Recording Tips

- Keep the browser zoom around 90–100% so configuration fields are readable.
- Do not show API keys, Auth Tokens, passwords, or other secrets in the recording.
- Pause briefly after each caller question so the response is easy to hear.
- Show the transcript after the test to prove the interaction actually occurred.
- Do not claim that a live PSTN call was completed if it was not; describe it as a simulated/browser test.

Prepared for the Inbound Voice Agent capstone submission.
